# Habitat Cards

## for Rugs alive™

### Instructions:

1. Print each of the seven Habitats Cards (**be sure to Fit to Page**) in either color or black & white on normal copy paper or white matte (uncoated) **card stock**.

*Note: If you have a laminator, feel free to laminate. Be aware of possible glare issues when scanning.*

2. Cut each Habitat Card out on the dotted line.
3. With your mobile device, download the FREE Rugs alive™ app. Launch the Rugs alive™ app and select your rug shape. This will get you into the Scan Mode as if you are viewing through your device's camera.
4. Lay a Habitat Card onto your rug over the letter of an animal that lives in that habitat.
5. While in the Scan Mode, aim your device's camera at the Habitat Card and Animal so that they both fit into the scan brackets on your screen.
6. While aligned, press the Scan button and stay still as it scans. A successful habitat match will place your animal into the Earth Bubble on your screen within a few seconds.
7. Once your animal is in the Earth Bubble, point your device's camera at the center of the rug (at the Zoo Crew logo). This will place your animal so you can walk around it, explore, and take pictures!

**Note: The Zoo Crew logo has to remain in the camera's view for the animal to stay in place.**

8. *To play the Zoo Crew Alphabet Song, simply point your device's camera (while in Scan Mode) at the Zoo Crew logo and press the Scan button.*

# Magical Zoo Coins

for Rugs alive™

## Instructions:

1. Print the sheet of Magic Zoo Coins in either color or black & white on **card stock**.

*Note: If you have a laminator, feel free to matte laminate. Be aware of possible glare issues when scanning.*

2. Cut out each Coin. When held in your hand, or placed on a flat surface, the Coin can act as a target for each of the 26 animals.
3. With your mobile device, launch the Rugs alive™ app and select your rug shape. This will get you into the Scan Mode as if you are viewing through your device's camera.
4. Lay a Habitat Card onto your rug over the letter of an animal that lives in that habitat.
5. While in the Scan Mode, aim your device's camera at the Habitat Card and Animal so that they both fit into the scan brackets on your screen.
6. While aligned, press the Scan button and stay still as it scans. A successful habitat match will place your animal into the Earth Bubble on your screen within a few seconds.
7. Once your animal is in the Earth Bubble, point your device's camera at a Magical Zoo Coin. This will place your selected animal onto the Coin so you can explore and take pictures!

*Note: The Coin has to remain in the camera's view for the animal to stay in place.*

# Additional Activity Ideas

**1. Magical Zoo Coins** The Coins allow students to explore the animals separately from the Rug. This gives teachers the freedom to create their own imaginative activities:

- Award a Coin to a student as a behavior reward (Zoo Keeper of the Day)
- Place the animal next to the letter it begins with and taking a picture
- Place the animal next to the food it eats (specific food; or carnivore, herbivore, omnivore)
- Use classroom items or manipulatives, place the animal into ordinal positions: first, second, third.
- Place the animal according to positional words using classroom items or furniture: above, under, beside, behind

**2. Social/Emotional** There are multiple opportunities for developing SEL skills when you pair students or have them work as a team where one has an iPad/tablet and other(s) have the habitat cards. This can teach and reinforce social skills including: collaboration, teamwork, relationship-building, effective communication, giving directions, and following directions. Conflict management, patience, kindness, and self-discipline can also be incorporated. Think creatively to come up with activities for also building: positive relationships, empathy, sharing with others, social engagement, respecting others, identifying and solving problems, etc ...

# Additional Activity Ideas

**3. English Language Arts (ELA)** The rug has all 26 letters along with our 26 zoo crew animals that begin with each of the letters. Students are exposed to the letters every day in the classroom. You can do many activities with Rugs alive for reinforcing letter recognition and letter sounds. During Morning Meeting or Circle Time, have students sit on the beginning letter of their name or assign a specific letter to each student and have them find and sit on that letter. During whole group, centers or any time you have a few minutes for a “game”, have the students stand on the rug (one per letter). You can practice beginning, middle and ending sounds by saying a word and asking the student standing on the beginning, middle or ending sound (whichever you choose) to raise their hand or jump up and down and say the sound. Use your imagination to create all kinds of activities!

**4. Math** When giving directions for taking photos with animals students can practice positional terms up, down, left, right, in front of, behind, above, below, etc .... Collect data - make your own data sheet, hand out to teams and have them use tally marks to compile data for the number of animals that live in each habitat. Then do a whole group activity to create a graph with their data.

**5. STEM Science:** animals/habitats; **Technology:** using iPads/Tablets and mobile app, **Engineering:** coding when matching Habitat Cards with the animals; **Math:** (see above);  
Challenge: matching the correct habitat with an animal that lives there so it will come "alive".  
Collaboration: working together to get the animal to come alive and taking photos with animals.

# Rug Care

## for Rugs alive™

Nylon is one of the most durable fibers on the market. It is a synthetic polymore that gives it the capability to be crushed, bent, or stretched and still return to its original state. This makes it ideal for high traffic areas.

### Tips

- Professional cleaning is the best way to clean your carpet.
- Do **NOT** walk on the carpet if it is wet.
- Keep away from electric floor polishers.
- Spot clean regularly in high traffic areas.
- Do **NOT** vacuum over serged edges.

### Spills and Stains

1. Immediately get up as much of the spill as possible. Only blot. **Do NOT rub.**
2. Use warm — **NOT hot water** to blot the rug with white cloths. If the spill is still evident, apply the correct solution and let it soak for about 5 minutes.
3. Rinse with warm water and remove an excess moisture.
4. When the carpet is dry, vacuum the pile to restore texture.

### Solutions for Stains

**Use Detergent:** Ice cream, Ketchup, Milk, Mustard, or Tea.

**Use Detergent or ammonia diluted with water:** Blood or Chocolate

**Use Detergent and white vinegar diluted with water:** Coffee, Mustard, Urine, and Vomit.

**Use Detergent or ammonia:** Food coloring, Glue, Grape juice, Ink (washable), Orange drink, Paper dye, Soda, and Watercolors.

### day-to-day

vacuum frequently

clean spills promptly

professionally cleaned  
every 12 months

# Habitat Cards

for Rugs alive™

## Helpful Tips

**What if a Habitat Card and Animal combination is correct, but it gives me the wrong answer - or no answer at all?**

Check your lighting. Rugs need to be a well-lit area. You can also try aligning just the Habitat Card in the scan brackets. Press Scan and slowly (within 2-3 seconds) pull your device away to reveal the matching animal.

**How do I keep the animal in place on the center of the rug?**

Make sure the Zoo Crew logo stays visible through your device's camera as you move around the animal. For best viewing, walk in a perimeter about 3-4 feet from the center of your rug while pointing your device at the Zoo Crew logo.

**Why are some of the pictures I take of the animals blurry?**

The Rugs alive app uses your screenshot feature, not your camera. So, you will need to make sure the device and subjects are very still.
